Relevant key words:

Team Teaching; Collaboration; Toolkit; Professional Learning

Summary:

This project facilitated the development of team teaching skills among teachers in two post-primary schools through a research project with Maynooth University. It involved a close and deep engagement with and between both schools to explore the challenges and opportunities relating to developing team teaching practices. Having identified the key issues for both schools, a series of workshops, peer learning activities and regular meetings was initiated to nurture a community of practice and research. This created opportunities for the sharing of teachers' experiences of team teaching to the wider school and educational community by supporting teacher agency as leaders of learning. The collaboration has resulted in the publication of a Team Teaching Toolkit comprised of resources developed by both schools and Maynooth University, primarily aimed at post-primary schools. The resources include videos from both schools, posters of team teaching models, CPD activities for schools, surveys and activities to gather student feedback, planning and reflection templates for teachers, as well as a bibliography of further reading. The Team Teaching Toolkit can be accessed at: <https://www.maynoothuniversity.ie/education/teamteachingtoolkit>.

Welcome to the Team Teaching Toolkit webpage!

We hope that you find the materials useful as you engage with team teaching in your school.
